Description

Sticky pad is composed of 50 layers of polyethylene film. Each layer is 100% coated with a consistent application of adhesive and is free of bubbles and wrinkles. The backing of the mat is coated with an adhesive that adheres to desks, but can be easily changed without leaving a residue. When the top layer is sufficiently soiled, simply peel it off for the next clean layer. The adhesive used is water soluble and environmentally friendly.

Usage

This product can be used together with cleaning roller on circuit boards, PCB, LCD, semiconductor, film precision printing and other surfaces.
